

March 2006 –

**Radiology Imaging Associates at Heritage launches a new state-of-the-art PET/CT Imaging Program.**

Radiology Imaging Associates at Heritage now offers PET/CT (Positron Emission Tomography/Computed Tomography) - a powerful imaging tool that is proven effective in the staging, localization and evaluation of:

Breast Cancer  
Alzheimer's Disease  
Colorectal Cancer  
Cervical Cancer  
Malignant Melanoma  
Lung Cancer  
Thyroid Cancer  
Heart Muscle Viability  
Esophageal Cancer  
Head and Neck Tumors  
Hodgkin's and non-Hodgkin's Lymphoma

PET imaging may help you and your doctor make the smartest decisions about your care for any of the conditions noted. PET shows metabolic activity within the body, which in some cases provides answers that other imaging tests cannot provide. It may be used to stage the extent of the disease, detect recurrent disease before it spreads, and evaluate response to treatment.

Exams are non-invasive and more comfortable as our Philips Gemini PET/CT system's open gantry allows our staff to interact with patients every step of the way.

Contact Radiology Imaging Associates at Heritage at (301) 856-3670 to find out how you may benefit from PET/CT imaging.
