

October 2006 –

**Radiology Imaging Associates at Lansdowne takes delivery of the first Open MRI in Loudoun County!**

Physicians and patients in the region will soon have access to the latest-generation in open magnetic resonance imaging (MRI) systems and the only Open MRI in Loudoun County. The Panorama 1.0T Open MRI from Philips Medical Systems offers physicians high-field image quality for advanced applications, and features a completely open design that makes getting an MRI scan much more agreeable for patients. The Panorama MRI will serve more patients, more comfortably, and provide image quality that previously was only associated with high-field MRI systems with cylindrical bore shapes.

The Panorama 1.0T MR system was delivered on 10/17/06 and will be installed and ready for operation in early December within a spacious, new outpatient center at 19455 Deerfield Avenue, Suite 102, Leesburg, Virginia 20176 in the Lansdowne Office Park. RIA will also provide the latest digital mammography technology, Bone Densitometry (DXA), and ultrasonography within a private women's area, along with x-ray and fluoroscopy imaging.
